- REDUCE LIFTING INJURIES

2

COMPARTMENT BODY

...high capacity...

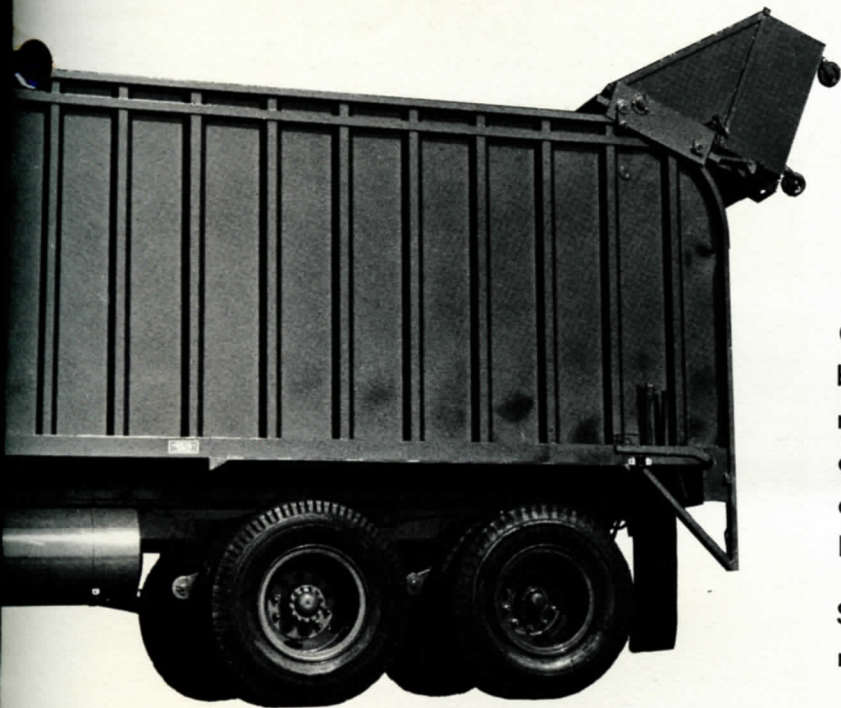

DIVIDER
ADJUSTABLE
TO 3 POSITIONS

QUICK DETACHABLE BARREL LOADER

Can be used instead of bin to load from one to three barrels.

When barrels are in "barrel loader" they are automatically locked in place.

...here is how it works

Controls for raising, lowering and dumping the bins are located conveniently on both sides at the rear of the truck. The bin is always visible from either control point so that the operator can accurately dump the bin at any position on the body length for even loading.

Special body lengths and power loaders can be made to fit individual needs and specifications.

The special loading bin is easily removed and rolled inside buildings for bulk handling of meat trimmings and bones. Low front height of loading bin facilitates easier loading from drums. Lifting

forks fit the built-in channels on the bottom of bins. Safety chains on each side secure the bin to power loading unit.

Capacity from 2 to 4 50 Gallon Drums.

The POWER LOADING RENDERING TRUCK

has these advantages:

- Lifts heavy loads
- Dumps at any position in body length
- Fills evenly from end to end
- Loader unit weighs only 1390 pounds
- Can be used in narrow alleys
- Easy to operate from either side
- Can be used on any length truck body or semi
- Heavy duty hydraulic system
- Reduces lifting injuries
- Saves time and labor

specifications:
