The arm cylinders are mounted outboard and are attached directly to the arms. This unique feature relieves the cross shaft from all torsional loading. 8,000 lbs. arm capacity is standard. 10,000 lbs. arms are an option.

For safety and ease of operations, controls are conveniently situated on the exterior of the vehicle, as well as the center of the cab.

The strongest packer blade in the industry. The functional design of the concave face plate, combines perfectly with the interstructure, producing a high degree of strength. The attached follower plate keeps trash from falling in front of the blade. Replaceable plastic guide shoes makes for low maintenance.
