DUMPSTER[®]
SYSTEMS

AT LAST!

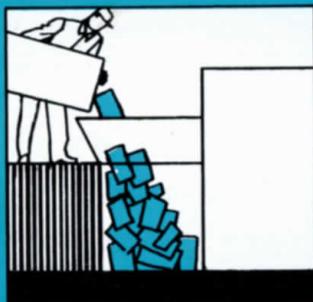

A stationary packer so small . . .
so powerful - so versatile - it can
pack into ANY refuse container.

The PowerMite is a small, low-investment stationary packer that compacts waste and refuse to a fraction of its former volume inside an attached refuse container. Boxes, paper, cans, bottles and other waste is reduced to a fraction of its former volume.

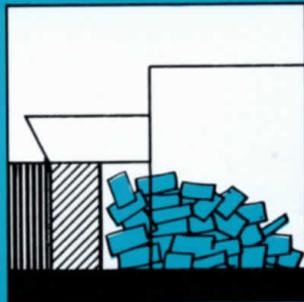

When the refuse is tightly compressed inside the container, a truck handling unit picks up, hauls, empties, and returns the container to the PowerMite.

a Low Investment...

Packs this much waste

into this much space

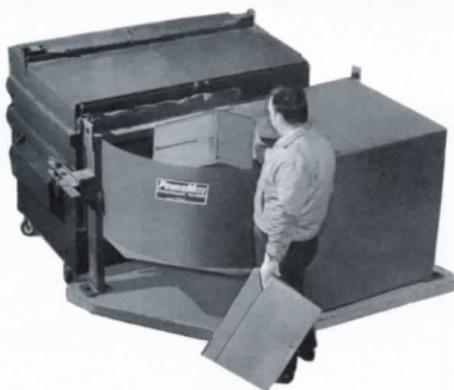

POWERMITE™ Saves Space! Cuts Hauling Costs! Works with Any Container!

The PowerMite System lets you compact and store your waste where space is tight. The packing unit is small enough to pass through narrow alleys, squeeze into basements and boiler rooms, or fit next to a busy loading dock. Anywhere there is an accumulation of waste and space is tight—PowerMite can do the job, inexpensively.

Compaction inside your refuse containers saves money. Bigger container payloads cut refuse service hauls and reduce long, expensive trips to the disposal area. And you'll need fewer containers to handle your refuse.

Yet, the real beauty of the PowerMite is its versatility. It can compact refuse into any container; in fact, the refuse containers you now own can be inexpensively converted to work with the PowerMite.

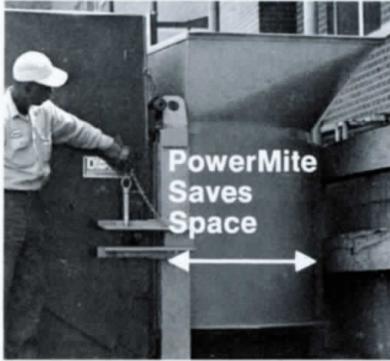

The smaller 1/2 yd. PowerMite takes up a mere 29 sq. feet. It's easy to operate, easy to load, and packs into any refuse container.

PowerMite crushes waste to a fraction of its former volume inside an attached container. A truck-handling unit separates the container from the PowerMite.

PowerMite's Exclusive Features

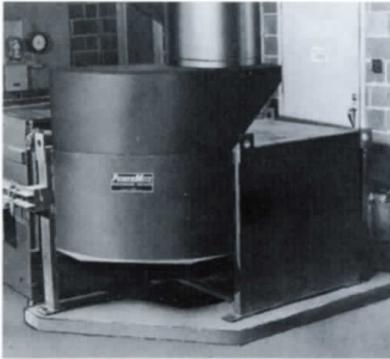

PowerMite saves space. The length of the one yard packer, without the container, is only 51 inches deep. The 1/2 yard packer is a mere 45 inches deep.

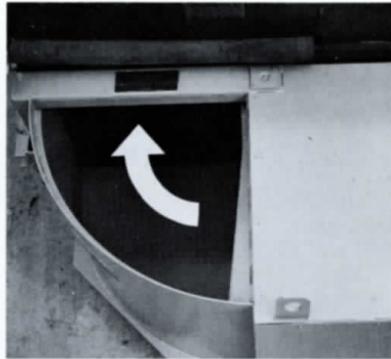

PowerMite's big charging box allows bulky boxes and large objects to be hand loaded from ground level.

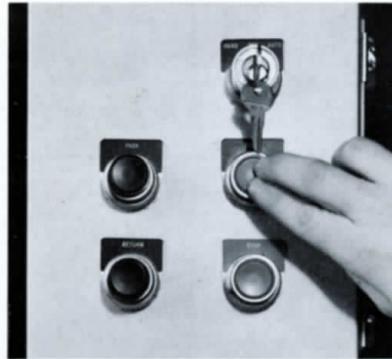

PowerMite can be set flush against a dock. No special dock board is needed. Loading hopper is optional.

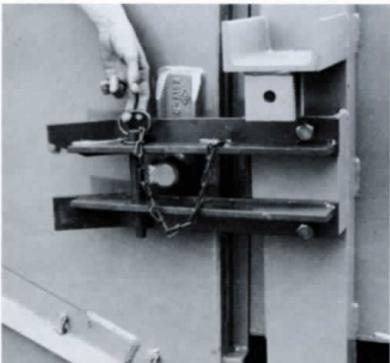

PowerMite may be chute fed or conveyor loaded. Optional hoppers are available to fit your needs.

PowerMite's powerful packer head sweeps through the charging box, moving refuse into the container.

PowerMite is easy to operate. Push-button controls give manual or automatic continuous cycling.

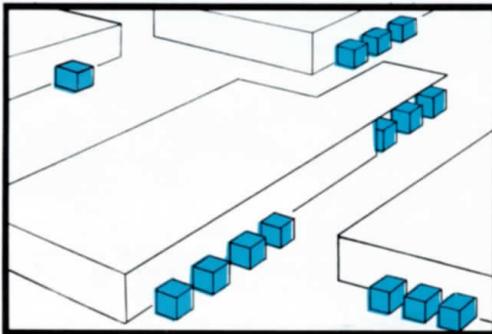

Container guides and locks on the PowerMite provide quick container hook-up.

Tight fitting canvas cover is fastened to prevent spillage while container is enroute to the disposal site.

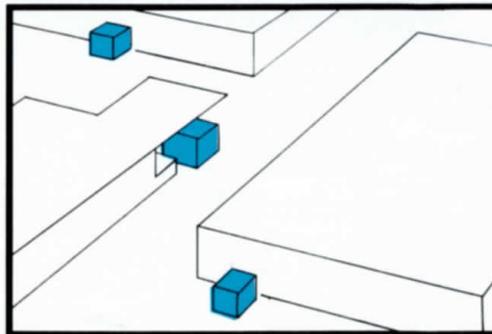

The self-contained power unit is skid-mounted for easy removal. It is mounted inside the packer for safe, tamper-proof operation.

CONVENTIONAL STORAGE

Loose, unpacked refuse requires many containers spotted at points of accumulation. Each container must be hauled and emptied frequently.

POWERMITE SYSTEM

PowerMite compacts and stores your refuse as it accumulates. Fewer containers are needed. Space is saved. And hauling costs are reduced substantially.

Put the PowerMite to Work For You

SUPERMARKETS

Big wooden fruit crates, paper boxes, and spoiled food are compacted and stored in a sanitary place.

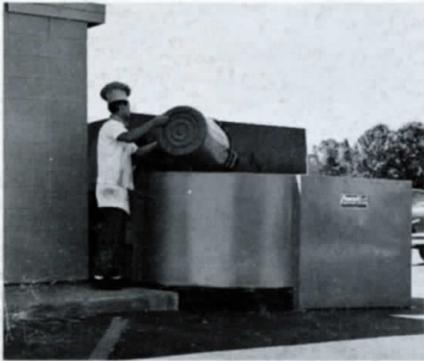

INDUSTRIAL PLANTS

PowerMite may be hand loaded from a dock; chute-fed; or conveyor loaded.

HOSPITALS

PowerMite keeps back dock clear of non-combustible trash and provides sanitary refuse control.

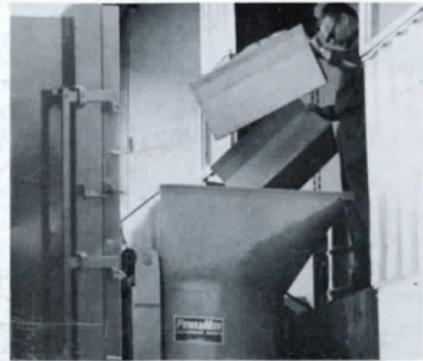

RESTAURANTS

PowerMite stores and compacts spoiled foods, leftovers, messy garbage and paper boxes.

HIGH-RISE BUILDINGS

PowerMite is so small, it can be placed in the basement of apartments, hotels, motels, and high-rise office buildings.

CHAIN STORES

PowerMite takes up a minimum of dock space. Stock room is kept clear of rubbish and empty boxes.

HOTELS AND MOTELS

The small ½ yd. PowerMite compacts trash in tight places like ramp garages and parking lots.

WAREHOUSES

A truck handling unit removes a full refuse container from a large warehouse.

APARTMENTS

A full refuse container is emptied on the spot and returned immediately to the PowerMite.

DEMPSTER BROTHERS, INC. KNOXVILLE, TENN. / Western Division; Compton, California

Dempster Brothers, Inc. constantly seeks ways to improve and upgrade its products. For this reason, design changes are sometimes made. If any dimension or capacity is critical, check with the factory for current specifications.
