# Always a firm grip on the container

Economical, flexible, adaptable, optimized, innovative – the modern waste-disposal industry is making increasingly high demands on refuse collection trucks. There is a need for practical, customer-oriented solutions for the extremely wide range of applications on the spot. FAUN offers vehicles suited to the requirements of economical waste-disposal logistics.

As an alternative to traditional exchange systems for demountable containers, FAUN has developed a practical and intelligent solution for the SIDEPRESS X and TOPPRESS X: the HAWKCHANGE hook device. The increasing differentiation in the collection of rubbish and secondary materials and the constantly growing volume of traffic with the resulting lengthened transport routes and times demand solutions that will give the refuse collection truck more time for its real task: collecting. The exchange technique of the HAWKCHANGE is the appropriate answer. You can choose between three container sizes, which you can quickly put down, pick up, push onto a trailer, or even tip at an angle of up to 90° for emptying.

With a mode of action comparable to that of a container lifter, the hook arm, which lies flat, powerfully grips the large bolt on the front end of the demountable container. In one fluid movement, the container can be lifted horizontally from the ground or replaced there. This saves valuable time and the container is at all times securely gripped by the hook arm. The driver controls the exchange process by means of the convenient remote control, which is simple and reliable to use. Slight adjustments also allow existing demountable containers to be handled with the FAUN hook device. Thus your vehicle fleet can be used flexibly at any time – just right for your waste-disposal job.

## TECHNICAL DATA **HAWKCHANGE**

### BODY

Practicable body capacity	m <sup>3</sup>	24/26/28
Weight <sup>1</sup>	kg	1.500
Weight auxiliary frame appr.	kg	300
Loading weight	N	140.000
Length appr.	mm	5.100
Width appr.	mm	1.300
Height appr.	mm	650

<sup>1</sup> Without auxiliary frame (acc. DIN 70020).  
Subject to change without prior notice.

The hook arm of the HAWKCHANGE has the demountable containers under control. In one fluid movement, the containers can be lifted or replaced.
