Barrel Lift Attachment

Here's a fast, positive method to dump heavy refuse trash barrels into a Gar Wood Load-Runner, a trash body, or other applications.

Only one man quickly does the complete job . . . eliminates the costly back-breaking labor of lifting barrels. It's an ideal unit for parks, beaches, recreation areas, special pick-ups

and street trash barrel pick-ups. Also used for missed pick-ups and on a supervisory vehicle.

Fast cycle time reduces loading costs. Barrel automatically tilts into packer opening to dump the refuse. Barrel returns to the ground by reversing the valve. Lifting capacity of Barrel Lift is rated at 500 lbs.

Barrel is securely held by spring loaded chain lock. Belting protects the finish of the container.

Operator activates hydraulic valve to raise barrel. The valve permits starting or stopping the barrel in any position.

When on the road the lift attachment tucks up and out of the way. Hydraulic cylinder is enclosed for protection.
