CONTAINER CONTENTS EMPTIED IN 15 SECONDS!

300% Faster...

The science of materials handling can solve your commercial and industrial refuse collection problems! With your Load-Packer 600 equipped to handle Gar Wood's new "Pax-All" containers, big-stop loading time is drastically reduced. You will make more stops per day, spend less time at each stop, cut your overhead substantially—and give each customer better

service, too. In addition to better service at lower cost, a Gar Wood container system on your commercial or industrial route permits neater, more sanitary refuse accumulation. Investigate the opportunities for greater profit, lower costs provided by this new container system. Your local Gar Wood distributor can give you all the facts!

CHECK THESE FEATURES!

INTERCHANGEABLE OPERATION

Gar Wood's new hydraulic container-lifting attachment empties competitive containers. No expensive changeovers or modifications necessary.

TWO-PIECE CONTAINER COVER

Split-design top covers are easier to open, no need for entire cover to be lifted every time container is loaded. Facilitates deposit of large or small quantities of refuse.

INDEPENDENT CYCLE

Hydraulic operation of "Load-Lift" attachment is completely independent of the 600's own packing cycle. Hopper can be cleared even while container is being lowered.

CONTAINER ROLLS ON 4 CASTER WHEELS

Fully-loaded container rolls easily on 4 rubber-tired, ball-bearing mounted swivel wheels. Heavy-duty type. Trouble-free. Easily pushed and directed by one man.

SEAMLESS CONSTRUCTION

The new "Pax-All" container's continuously welded seams insure that it's leak-proof, odor-proof, rodent-proof. Strongly reinforced, this rugged design assures many years of continuous service.

NO CABLES TO ATTACH

Just roll container up to hydraulic "Load-Lift" attachment . . . snap locks into place . . . and touch the control lever. That's all. No need to reach into hopper to attach cables or chains. Faster! Safer!

TAPERED DESIGN

Container's tapered shape insures fast clean-out! Bigger top and smaller bottom means tightly-packed refuse is less likely to clog or jam. Fewer delays.

ONE-MAN OPERATION

One man can easily do everything faster, easier, better. Reduce labor costs, improve efficiency by "containerizing" your commercial and industrial routes. It's the modern way to solve your "big stop" collection problems.
