

*Heil Conveyors in Action*

*Crewmen loading demolition debris into a Heil Conveyor, which was capable of handling granular material as well as refuse*

*Dangerous conveyor flights were completely shielded on the Heil model, with material loaded through looped openings at either side of the boot*

*City of Milwaukee 21-yard semi-trailer version being loaded at both ends*

*Dual openings on the Heil Conveyor sped the loading process, and kept moving flights away from crew and trash barrels.*

*Heil Conveyor wide-hopper version with tailgate extended*

*In this view, note the row of conveyor flights visible near the inside top of the body*
