

LODAL[®]

**LOAD-A-MATIC CONTAINER SYSTEM
FOR GOOD HOUSEKEEPING SERVICE**

Manufactured by **LODAL, INC., Kingsford, Michigan**

HYDRAULIC POWER DOES ALL THE WORK

LoDal's exclusive triangle coupler connects the container in a matter of seconds. It couples at angles . . . and reaches out to pull containers into a full couple without moving the truck. This patented coupler is fast and efficient . . . a bonus in extra containers serviced per day.

This powerful loader raises the container with fast, smooth action . . . as the operator levels it preventing spillage. The triangle coupler is in full view of the driver. The loader boom arms are rugged box steel members . . . a sturdy machine built for years of service with minimum maintenance.

Complete loading cycle is less than one-minute per container . . . from start to finish. Full side loading doors are on both sides of the body for hand loading loose materials not in containers. The Load-A-Matic handles the smallest container to the largest . . . with equal efficiency and speed.

The triangle control cylinders tilt the container . . . and discharge material into the large compactor body. The compactor hydraulically compresses the material into minimum space with 60,000 lbs. of force. Hopper windguards prevent blowage on all sizes of containers.

LoDal[®] LOAD-A-MATIC

CONTAINER SYSTEM FOR . . .
SHOPPING CENTERS
HOSPITALS
SUPER MARKETS
INDUSTRIAL PLANTS
SCHOOL SYSTEMS
MILITARY

A modern LOAD-A-MATIC Container System is the latest word in *automated refuse handling* . . . with lower cost per cubic yard.

Large steel containers provide adequate space to dispose of all types of refuse . . . with no unsightly mess or fire hazard.

Eight sizes and types of containers . . . from 1/2 cubic yard to 8 cubic yards . . . assures a correct size for every location. The container itself serves as the *meter* that gauges the customer service.

This modern refuse handling system permits one truck with one man to service more stops per day than can be done with several trucks and many men using expensive hand loading methods. LOAD-A-MATIC Systems pay off fast . . . and greatly improve your service.

BEFORE ▲

AFTER ►

PATENTED BONUS COUPLER
 LoDal's Triangle Coupler is fast and flexible . . . with extra containers serviced per day. Couples at angles up to 30 degrees . . . reaches out up to 16 inches. Coupling actions are *retrieved* with no need for precise truck alignment.

POSITIVE CONTAINER LOCKS
 Containers are automatically locked to loader triangle with heavy steel pins. The tapered triangle holds containers snug at all times. Vertical coupling and uncoupling . . . with truck standing still . . . works fast and reduces wear on the truck.

DOCK PICK-UP
 Containers are serviced from dock height or ground with equal ease. Triangle reach permits containers to be a safe distance from edge of dock. Containers are available with casters . . . and couplers for industrial plants.

CONTAINER WASHER (Optional Equipment)
 A great improvement in sanitation service at the container location. It cleans and disinfects with the container over the body. A mechanical pump and pressure regulator recirculate water in the tank . . . and keep the chemicals in solution.

LOAD EJECTION
 The powerful body compactor plate *ejects* the load . . . as well as compressing the refuse. A single lever releases the tailgate locks. This high capacity body provides fast clean discharge . . . without danger of over-turning the truck.

HOPPER COVER (Optional Equipment)
 Hydraulic Hopper Cover is fully automatic . . . swings closed with minimum overhead height whenever the load is compacted . . . giving extra capacity. Fast hydraulic action opens the cover as the compactor plate retracts.
