

Lödal, Inc.

LAM

LAM created by Lodal, Inc. some forty years ago began as a complex but simple idea.

Through the years, our ideas, innovative engineering, and dedication to a quality product makes LAM the logical solution to your rubbish collection concerns.

In this "dollars-and-cents" environment where budgets are tight and the competition is tough, you need Lodal, Inc., the company that gives you the ability to react to your citizens and customers need for service.

We do this by producing affordable, capable, and efficient collection equipment. LAM and Lodal, the product and the company you can depend on.

Front loader models pictured are the LAM with forks, and the exclusive patented Lodal triangle single point hookup.

EVO

Are you taking too many unnecessary steps? Is there an easier way to handle curbside collection routes?

If you don't have Lodal equipment, your answer is sure to be "yes". We at Lodal can help solve this problem with the right equipment. . . .and there's proof behind our promise.

Our EVO side loader is designed and engineered specifically for fewer steps, fewer people and fewer trucks. This means reduced overhead, better cash flow and is certain to change the way you measure productivity.

Your crews will appreciate first hand what goes into a Lodal built vehicle, and how it makes work easier. You will also appreciate what it does for the bottom line.

Side loaders pictured are the EVO 20 cubic yard semi-automatic. Also available (not shown) is our new fully automated side loader model.

Lodal, Inc.

ECO

When Lodal decided to develop a curbside recycling vehicle, we had but one objective; invest the time, money and energy necessary to develop a unique, efficient, versatile, state of the art curbside recycler.

Our ECO recyclers are the benchmark by which the solid waste industry measures recycling vehicles today.

Built from the ground up, our ECO's are not encumbered with another truck manufacturer's chassis. This accounts for Lodal's versatility and ability to meet your most specific recycling needs.

With the ECO's, like all Lodal built equipment, front line employee work is made easier. With faster curbside time, it allows service to more homes per day and it is certain to change the way you measure efficiency.

Recycler models pictured are the ECO 3000, the ECO Bi-loader, the ECO 3030, and the ECO 3030 with hydraulic tailgate.

Lodal, Inc.

LBL

From its inception, this dump truck mounted loader has been and is a typical Lodal concept; increase efficiency and reduce costs.

A Lodal bucket loader does just that.

Cities, Counties, and States use the LBL to perform street repair, pickup of storm debris, landscaping, erosion repair, snow removal, and everyday load haul tasks.

LBL. Durable, efficient, productive, which are reasons enough to speak to a Lodal sales engineer for the many other functions of a Lodal bucket loader.
