Approach to Recycling*

# Leach **RC Series**... Simple. Durable. Th

## A Simple Solution to a Complex Problem

Today, with more and more communities adopting recycling, there seems to be a growing confusion. About which products and substances to recycle. About sorting. About containers and collection policies. About who should collect and recycle. Even about public motivation and cooperation. And now Leach—first name in refuse collection—brings a simple solution to the collection of recyclables: the Leach RC Series. Simple in concept. Durable in construction. They provide for the cost-efficient collection and on-the-spot sorting of collectibles.

## More Usable Space

The Leach RC 23 is a truck-mounted unit with 23.5 cubic yards of *usable* space. The Leach RC 17 is a trailer-mounted 17.2 cubic yards of usable space, and can be towed behind virtually any truck of 10,000 GVW or more. In either case, the operative word is *usable* space. You get it with Leach RC Series.

## Easy to Use

Built on a low-mounted frame, the Leach RC Series have drop-down side panels, so collectibles are easily loaded from the curb. Pre-sorted materials can be placed directly into their bins. And it is the work of just a few moments to separate unsorted materials right at curbside. This no-frills manual loading is ideal for the one-container or no-container systems adopted by most communities.

# The Down-to-Earth Recycling Collector

## Space for Every Collectible

The Leach RC Series is divided into four generous bins: each with a drop-down panel on each side to facilitate loading from either curb. The bins are separated by lockable dividers, which can be opened individually for selective emptying. So no matter what materials—or how many of them—a community selects for collection, the Leach RC Series can accommodate them with ease.

## Selective, Clean Emptying

The Leach RC Series empties by means of a hydraulic body hoist dumping mechanism. Selective bin emptying is achieved by unlocking the bin divider panels in succession. And the high dump angle assures clean, complete emptying. It is simple, positive, effective and uncomplicated. No mechanical "gimmicks." Just simple, straightforward performance in the Leach tradition of quality.

## Built for Lasting Performance

For over 100 years, every Leach product has been built with the finest quality materials, the most advanced engineering. And this is true of the Leach RC Series. Yet, since simplicity in operation is called for, it is engineered with typical Leach attention to detail. The result is a collection unit designed and built precisely for today's collection requirements... and one which will continue to give the same high standard of performance for many years to come. The Leach RC Series is—simply—the best.

# The Newly-Expanded Leach Factory... Where Leach Performance Begins

Leading-edge Leach engineering is translated into industry-leading on-the-route performance in the newly-expanded Leach factory. From here, Leach products—like the legendary 2-Rll and the Leach Alpha—go out to customers all over the world, because Leach quality is known and valued worldwide. And Leach Company's commitment to our environment is now expanded with the addition of the Leach RC Series.

## The Leach Distributor Network Keeps Leach O.E.M. Parts Accessible

### Only Leach O.E.M. Parts Give You Leach Performance

All across the country, a carefully-selected network of Leach distributors sells and services Leach equipment. They know Leach equipment, and their trained, experienced technicians provide complete service and maintenance. They also stock Leach O.E.M. parts, so they're readily accessible when you need them. Because they know that only genuine Leach parts give you the Leach performance you bought in the first place. "Will fit" just won't do!

*You get more into it  
because we put more into it.*
