LOADMASTER™

"THE TRADITIONAL CHOICE FOR RELIABILITY & PERFORMANCE"

LOADMASTER™

LONGER, LOWER, LIGHTER

LEGACY

R = LARGER LEGAL LOADS

Ejection Blade

The curved ejector blade rides on six "UHMW" polyethylene wear shoes. Blade guides are closed channels welded to the inside body side-walls, up above the dirt and grit which can accumulate on the floor, for extended shoe life and low maintenance.

Hydraulic Controls

Controls are located in a comfortable location, mounted in machined "UHMW" polyethylene, for a more smooth wear resistant vibration dampened operation.

Body Side Door

The Legacy side door provides a large convenient maintenance access. The attractive body contoured door has large grab handles to help enter and exit the compactor body. Side door access ladder provided. Hidden hinges to eliminate rust.

Compaction Blades

The strong clean rugged design of the Legacy blades are also the easiest in the industry to remove and maintain. Loadmaster engineers designed the blades to run on large uhmw plastic guide shoes for minimal wear and long life. Compact and sweep cylinders are internally "cushioned" for smoother quieter operation.

Optional Container "Kick" Bar

Loadmaster has several dump options available. Here you see a 2-10 option and a kick-bar.

Tailgate Locks

Loadmaster offers both heavy duty "turnbuckle" style and automatic hydraulic tailgate locks. Our tailgate lift cylinders have large oversize push rods, with built in restrictors, to slow the drop speed of the truck tailgate. The tailgate seal is a tough 70 durometer.

Wiring

Loadmaster believes it has the finest wiring in the industry. All main connectors are "aircraft" type. Each wire has its function printed on the wire itself. Your mechanic should not have to go back and forth with his voltage meter wondering where each wire goes. It's clearly labeled on each wire at the connector!! All wires are enclosed in a breathable, protective, heavy nylon loom covering. Certain optional accessories are provided for in each loom.

Body Side Walls

The Legacy utilizes clean curved pre-stressed body side walls. Your logo will display beautifully, your maintenance staff will love to clean it, your customers will admire it. Elimination of the old style vertical rib reduces rust's ability to destroy the vehicle's strength and appearance.

Hydraulic Cylinders

Loadmaster utilizes the most advanced design available in its cylinders. We take great pride in the technology and components from which our cylinders are constructed. We could not possibly describe our cylinders in this short paragraph. Call and ask us for a complete description.
