ROTO-PAC

has a brother
with a bigger bite!

THE NEW

LOAD-MASTER

...a new team to meet your total refuse collection needs....

ROTO-PAC

the unique refuse collection unit featuring
continuous loading now introduces its new team-mate...

LOAD-MASTER

the brother with the bigger bite.

The famous ROTO-PAC has set a pattern of performance-excellence that's the standard of the industry. It has proved itself faster on the route . . . covers more blocks a day and delivers more to the dump in a given period of time than any other unit in the field. ROTO-PAC is unsurpassed as a continuous loading and compacting unit.

Now comes its big brother, the LOAD-MASTER, to handle bulky material with the same efficiency. The LOAD-MASTER is highly versatile, with a large-size hopper and powerful blade to compact all types of refuse including large, bulky, and odd-shaped objects. Its rugged, dependable construction results in minimum maintenance and maximum efficiency. Speedy reloading, direct thrust compaction, and non-clogging ramrod ejection means that LOAD-MASTER is the most effective batch packer in the industry.

Large capacity Hopper takes two cubic yard load of bulky materials with ease. Start reloading in seconds.

Rugged constructed Packing Panels with direct-thrust. Results in greater compaction.

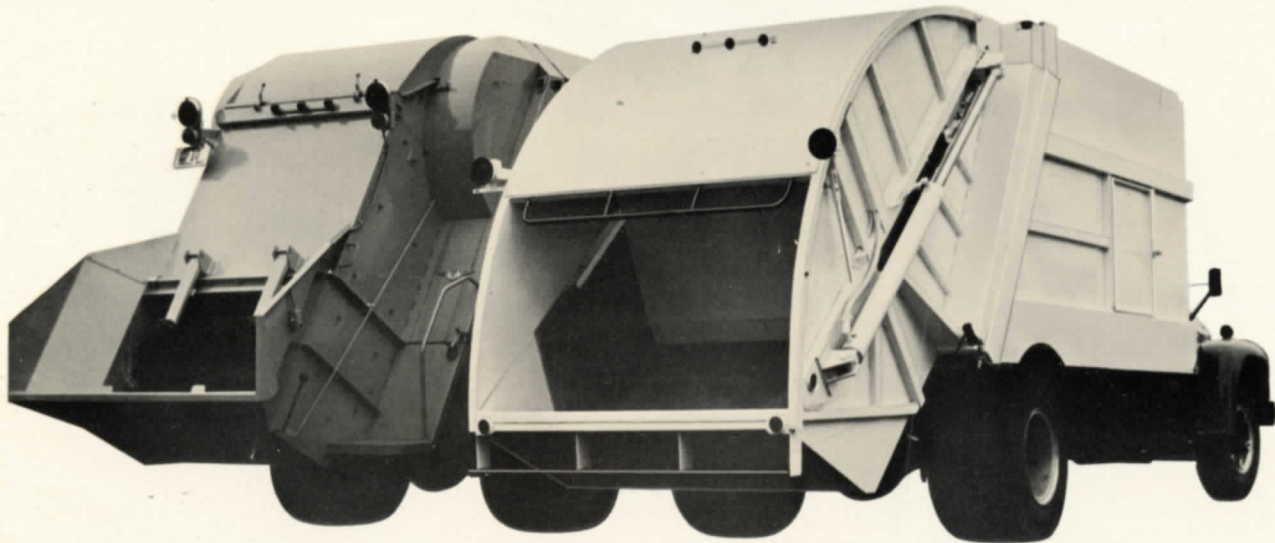

Bulky, odd-shaped objects such as sofas, 55 gallon drums and shipping crates are handled swiftly.

Ease of dumping is assured by Ramrod Ejector Panel.

this new City Tank team meets your total refuse collection needs.

Refuse and sanitation specialists know the speed and efficiency of the continuous loading ROTO-Pac. Now—with the addition of the new LOAD-MASTER, municipalities and private contractors can have the most versatile and efficient team available to meet all refuse collection needs. Here's why:

ROTO-PAC gives you this:

CONTINUOUS LOADING with no waiting, no waste of time or energy. Fully automatic — loads faster than crew members can dump.

FASTEST LOADING SPEED of any unit available today. This means Roto-Pac is faster on the route — covers more blocks in a day.

MORE PICK-UPS PER DAY make it possible for two Roto-Pacs to do the work of three ordinary loading units.

PRE-COMPACTION is simple and efficient. Completely and continuously fills the body with all types of materials, leaving no voids.

CONTINUOUS COMPACTION eliminates lost time. Only Roto-Pac loads and compacts at the same time by operating as a single unit.

RUGGED CONSTRUCTION gives you long wear, long life, and fewer maintenance problems.

GREATER SAFETY is assured by man-size riding platforms, large grab-handles, simplified controls.

PROVEN PERFORMANCE by thousands of units presently in operation.

LOAD-MASTER gives you this:

HANDLES ALL TYPES OF BULKY MATERIALS, including large, odd-shaped items such as sofas, packing crates, drums, miscellaneous furniture.

LARGE CAPACITY HOPPER holds 2 cubic yards when fully loaded.

FAST PACKING CYCLE allows hopper to be re-loaded immediately after packing panel clears loading sill.

SUPERIOR POSITIVE HYDRAULIC SYSTEM cylinders are located **outside** of waste area; there's no risk of damage to pistons by waste materials.

SIMPLIFIED CONTROLS make operation speedier and safer for workers; reduces maintenance.

RAMROD EJECTOR PANEL is non-clogging. Refuse can be unloaded with trouble-free ease, even when solidly compacted to full body capacity.

DIRECT-THRUST COMPACTION makes for simpler, more effective compaction of refuse.

EASE OF MAINTENANCE is assured by simplified design and rugged construction. There are only 25 grease lubrication points.

Full details and specifications available on request.

Plus: The same efficient container system can be used with both Load-Master and Roto-Pac.
