

# THE BUSINESSMAN'S FRONT LOADERS

The first thing you notice about Maxon front loaders is that they look different. They are different. They're faster, stronger and they carry a lot more payload.

Maxon front loaders are based on a different design concept from the old-style front loaders. We call them the "Businessman's Front Loaders" because they are designed for haulers who are not afraid to do things a little differently, if the change brings them higher profits.

Maxon front loaders have been around for over 20 years because they make more profits per truck no matter what type of route you put them on — commercial, residential or combination.

It's been proven time and time again. The Maxon packer comes back from front loader routes at least one hour sooner, sometimes two hours sooner, whether it's up

against Dempster, Heil, Pak-Mor or Leach. And Maxon bodies can pack as much as one-third more payload (up to 7,000 lbs. more).

The extra speed and power of the Maxon front loader can eliminate a trip to the disposal site. Others use it to pick up more bins per load. Either way, the Maxon front loaders increase profits per truck.

If you're in business to pick up trash, any packer body will do. If you're in business to make as much profit as possible in a highly competitive marketplace, Maxon has the front loader for you —the Businessman's Front Loader.
