

THEY KEEP PROFITS UP BECAUSE THEY DON'T BREAK DOWN

The difference between a MAXON® Roll-Off and any other can be summed up in one word — quality.

The MAXON Roll-Offs are built to give you years of reliable, trouble-free operation, with absolutely no shortcuts on quality. The control valve and all hoses are mounted inside the rails for protection. Extra heavy-duty reinforcement in the hoist cylinder and hydraulic tank mountings, extra brackets on the rails and chassis, the

extra quality built into MAXON Roll-Offs, right down to the heavy-duty rear hinge put them in a class by themselves. Inside and outside controls are standard equipment.

You'll see the difference just by looking at a MAXON unit. And we invite you to call us, or drop by any time, we'll be happy to show you what we mean. When quality is built in it doesn't wear out.
