

MAXON LEGALONE™ TIPS THE SCALES IN YOUR FAVOR

Today's stricter enforcement of weight limitations is making it almost impossible for haulers to be legal and profitable at the same time...almost. This highway patrolman is tearing up the ticket because he made the mistake of stopping a Legal One™ front loader. He could have stopped just about any other refuse truck and made his quota. But the Legal One™ West can carry 11 tons of payload on most chassis. And do it legally, because the super strong all steel body weighs just 12,700 lbs. It has over 100,000 lbs. of packing

force, a 16 second lift arm cycle and a 30 second packing cycle. The Legal One™ East has 8,000 lb. lift arms, a 20 second lift arm cycle and weighs just 14,500 lbs.

If your body manufacturer gives you excuses for "western" bodies that weigh 15,000 — 18,500 lbs. and "eastern" bodies that weigh up to 20,000 lbs., give us a call. We'll give you a solution to overweight problems that will tip the scales in favor of higher, more profitable payloads.

The one that got away. The Legal One™ front loader carries 2,300 to 7,300 lbs. more legal payload.

Legal One™ West — 12,700 lbs.
(6,000 — 7,000 lb. lift arms)

Legal One™ East — 14,500 lbs.
(8,000 lb. lift arms)
