

Multilift announce the New Norba Feeder

FEEDER

THINK AHEAD to a new approach of domestic refuse collection

The New Norba Feeder represents a rather different approach to the problems of Urban domestic refuse collection rounds. It has been designed to function as a satellite vehicle working in conjunction with the standard refuse collector.

The Feeder is light, nippy and small enough to contend with Closets and alleyways common to the estate developments of our new cities. It operates with a driver plus one or two operatives, refuse contained in plastic or paper sacks are placed upon the rear platform which in turn is discharged into the body.

The 10 cu.m. capacity will comfortably handle between 100 to 150 sacks depending on size before returning to the main collector. Here the body is tipped and the load discharged cleanly into the hopper of the collection vehicle for compaction.

The Feeder offers more than a new approach to an old problem, it brings many obvious economies as well as the high standard of design engineering that Norba

customers have come to expect.

The Feeder is a development that has come at a time when soaring costs have to be met with a fresh appraisal if the present standard of refuse collection is to be maintained at anything approaching an acceptable cost to the community.

Think ahead . . . begin by discussing the proposition with us. Contact Multilift Limited, Norba Division, Bury Mead Road, Hitchin, Herts SG5 1RG. Or ring Hitchin (0462) 4594.
