

# SEAL-PRESS

has the  
'seal of approval'

*Go Modern - Go Hydraulic - with a Seal-Press refuse unit*

*You Get the 'big 3' with Seal-Press—assurance that you have the best!*

Since 1954 SEAL-PRESS units

have been the 1st choice of both private firms  
and municipalities — in the U.S. and abroad

From drawing board to assembly line SEAL-PRESS refuse units are engineered for performance. Superior cylinder and hydraulic design insures *rugged construction, efficient operation, greater economy* and means that you get maximum ease of operation and maintenance. "Out of service" days are almost unheard of, for craftsmanship and durability are stressed in every phase of SEAL-PRESS production. Economy in operation... not in construction... is emphasized, as you get many "extras" SEAL-PRESS designers deem essentials. This is only one reason why SEAL-PRESS has the approval of cost conscious management throughout North America and in foreign lands. Private collector... or municipal department... a SEAL-PRESS unit is engineered in every way to meet your every need.

**NOW...after exhaustive research and testing  
only SEAL-PRESS offers you all 3**

**1**

## Hydraulic Operation

A double acting cylinder, telescope type, multi-stage hydraulic operation drives packer plate for packing and quickest unloading. System uses 50 gallon per minute helical gear pump. SEAL-PRESS hydraulic assures smoother double acting packer plate. Controls cab mounted, outside optional.

New hydraulic double acting cylinder drives packer and ejection plate.

## 85,000 lbs. Pressure\*

Here is the power... the performance... the packing pressure to build the profitable operation you need for one truck or a fleet. 85,000 lbs. of pressure — more than any other unit available! Another SEAL-PRESS benefit for you in the '60s.

## 12 Months Warranty

Any refuse unit is only as reliable as the firm who produces it... and backs it up. SEAL-PRESS, first in many design features, is now first again to offer a full year warranty. SEAL-PRESS international reputation backs up any unit purchased with signed 12 months warranty.

New 12 months warranty.

# Don't be chained to your garbage problems

## Go Hydraulic with - Seal-Press

There are many different kinds of refuse units in use in towns and cities across the nation... from plain flat bed and canvas covered trucks to chain driven packer plate jobs... to the most modern cylinder shaped hydraulic-operated SEAL-PRESS unit. SEAL-PRESS Mark 16-20-24 yard units offer the collector the very latest in design and operation; of special importance to any buyer is the hydraulic operation of the packer plate which allows the

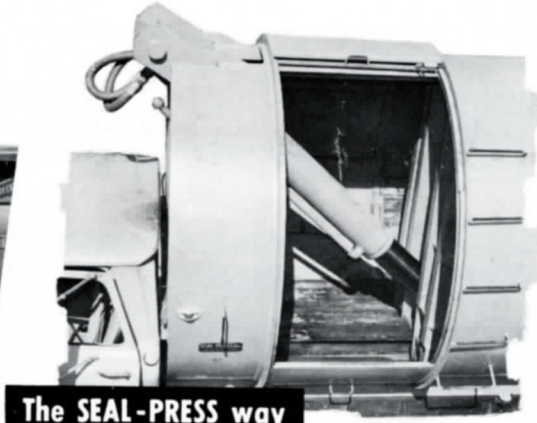

tremendous pressure within the cylindrical shaped body. Instead of compression plate being controlled merely by cable or chain powered by the vehicle's drive-shaft, a complete hydraulic system is used on all SEAL-PRESS Mark series to produce the tremendous pressure of 85,000 lbs.\* Here's how the system works... and why it will mean more payloads when you purchase SEAL-PRESS.

*\*at 1500 p.s.i.*

### The OLD way

Old-fashioned collection methods are often inefficient... insanitary — and more costly in the long run.

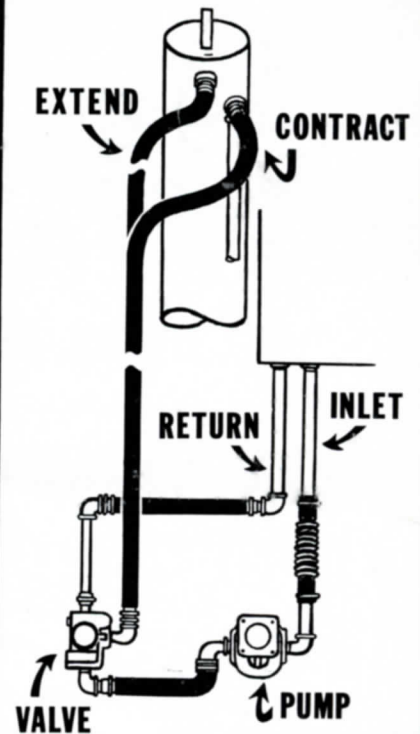

### The SEAL-PRESS way

From inside the truck cab, with simple lever operation driver operates the driving of packing plate... to pack... or to eject. Tremendous pressure originates here at first stage of double acting, telescope type cylinder.

### Why hydraulic makes SEAL-PRESS superior

With SEAL-PRESS patented hydraulic process, packer plate which compresses refuse is driven at enormous pressure, with least effort, most efficiency. Just a hydraulic principle. There are no moving chains, conveyors, or other mechanical systems to break down. Below, schematic layout of hydraulic system.

At the superior pressure of 85,000 lbs.\* a Seal-Press unit will compress a greater amount of refuse than one could imagine in such a compact unit. This means fewer trips to dump... greater payloads... lower operating costs. Comprehensive studies show that SEAL-PRESS units complete their run in fraction of time of other units.

new savings with  
Seal-Press**

**Sixteen  
20 Cubic Yard  
Units for  
the city  
of  
New Orleans**

Pictured is part of a fleet of trucks, all SEAL-PRESS units, now in operation by the City of New Orleans. New Orleans uses nearly every make refuse unit now on the market, yet the city's preference for the most modern and efficient is shown by the fact that the majority of their units are SEAL-PRESS. Although the SEAL-PRESS hydraulic Mark series is new, with the latest design features, a number of these units are already in profitable use by both private and municipal refuse collectors.

**12,210 lbs. of Refuse**

The certified weight ticket shown here shows the total net weight of 12,210 lbs., for a load of refuse hauled by a SEAL-PRESS unit for the City of Waco. In our files are copies of many other weight tickets from both municipal and private collectors, many of them showing even greater loads carried by SEAL-PRESS units.
