

Tecorp 10

**The "10 yarder" that really packs
a full 10 cubic yard load**

The Tecorp 10 is small enough to mount on a one ton chassis, and yet will pack a full ten cubic yard load. One man with a Tecorp 10 can perform dozens of odd jobs for a fraction of the cost involved in using the larger conventional units. In fact, the relatively small size and maneuverability of the Tecorp 10 enable it to go into many places where the larger units can't go. The low initial investment and the labor economy of one man with a Tecorp 10 could very well change your entire concept of efficient route management.

Tecorp 10

The "Pick-Up" unit that puts a new dimension in route management

Once you've seen the Tecorp 10 in action and considered its full potential, you'll find there's no limit to its possibilities. Widely scattered stops that used to be unprofitable can be handled easily with a Tecorp 10. You can make money on apartment complexes, hospitals, and rural areas. Drive right into private driveways and long, narrow alleys. Estate driveways, trailer parks, and playgrounds with trees and low overhanging branches cause less problem with a Tecorp 10. Use it for missed pick-ups or special pick-ups or route supervisory work. This is the ideal refuse collection unit for building new routes, or breathing new life and profit into routes that are currently costing you money.

- The Tecorp 10 is completely hydraulic
- One man operation for labor economy
- Short in length, low overall height
- Mounts on a one-ton chassis for economical operation and low loading height
- Low initial investment
- Loads from either side, or both sides at the same time
- Dome shaped tail gate for better compaction
- Controls located at the front of the unit for safety
- Ejects load cleanly with one sweep of the packer blade
- Optional sweep cycle on the packer blade
