

VDK®
speedloader

a light sturdy construction

- weight of superstructure approx. 4,540 kg./15 m³
- maximum utilization of front axle
- advantageous utilization of rear axle, even with container loading system
- special steel alloys have been carefully designed into an ingenious but simple concept
- the large base gives excellent stability to the slide

smooth ejecting system

- ejecting completed in less than 40 seconds
- jamming of the ejecting system impossible, due to I-girder guide design
- maximum opening condition of tail gate, without hinder at incinerators
- full automatic locking and unlocking of tail gate

will accept a comprehensive range of domestic refuse

- loose household refuse
- light bulky waste
- bins and bags
- household containers of 120, 240 and 330 litres
- containers of 600, 660, 770 and 1,100 litres

the VDK® Speedloader has been designed and built by the engineering and production services of VDK.

simple hydraulic system

- press and slide with one cylinder each
- cylinders not in contact with refuse
- hydraulic pipes, cylinders and pump easily accessible
- ease of operation : one button to start, one emergency stop

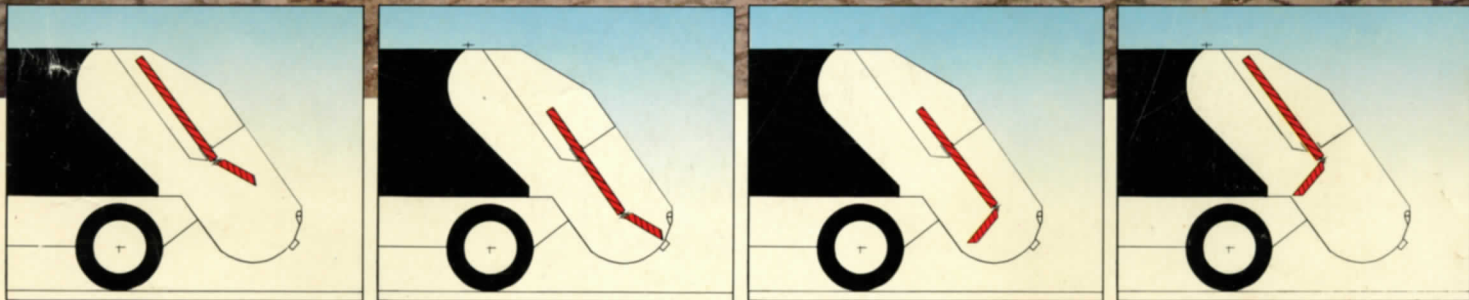

fast and efficient operation

- working cycle of + or - 14 seconds
- possibility of continuous loading
- minimizing the "chopping knife" effect
- pressplate edge 500 mm from rave rail
- unique safety aspect
- very high compaction achieved
- no bursting refuse

built to customers special requirements

- superstructure available in 2 widths, 2.49 m and 2.17 m
- capacity from 9 m³ to 18 m³
- ideal for all bins and containerised systems up to 1.100 litres
- pump drive at choice of customer i.e. front of engine or power take off
- various options possible

fabrication program

- Dept. waste systems : household refuse collectors and bulky waste collectors
- Dept. industrial engineering : key turn palm oil mills and rendering equipment

service

VDK has a specialised department with highly skilled personnel. A direct connection exists with the engineering.
