Automatic Cycling

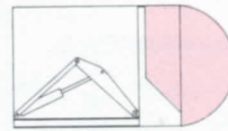

LOADS EASY PACKS HARD

Scissor Mechanism
In Retracted Position

Blade Packing

Blade Fully Extended
Automatically returns
To Load Position

**THE ORIGINAL
SINGLE SCISSOR
PIONEERED AND
PROVEN BY WAYNE**

HIGH DENSITY PACKING, achieved by the **SINGLE SCISSOR**, operated by one **DOUBLE ACTING CYLINDER**.

Sturdy center H-Beam guides and supports packer blade. The most effective way to handle off-center loads, common to side loaders.

The **ALL HYDRAULIC AUTO CYCLE** system operates packing blade automatically. Single lever control both sides of body.

Pressure relief system protects packing body from damage.

Packer blade tucks . . . and forces material into bottom of round tail gate . . . then circulates refuse up and around for optimum packing.

**ALL HYDRAULIC . . . ONE DOUBLE ACTING
CYLINDER . . . NO ELECTRIC CONTROLS**

EJECTS CLEAN

JUST LIFT THE TAIL GATE and . . . eject the load.

MIGHTY PACK body remains stationary when dumping.

Refuse empties completely . . . no inside body obstructions.

Easy to sanitize . . . with steam hose or water flush.
